

Manage All your Linux with Uyuni

Don Vosburg

Systems Management Enthusiast

don@vosburgs.org

Product Manager – SUSE Manager

dvosburg@suse.com

What is Uyuni?

- Scalable systems management solution
- Drift control and patch cycle automation
- Hardware and software inventories
- Configuration management
- Granular control over content delivery

Any Linux. Anywhere. At any scale.

Where did Uyuni come
from?

Origins: Spacewalk project

- Free & Open Source Systems Management
- Started in 2008
- Upstream of RH Satellite 5, SUSE Manager before 3.2
- Project shut down in May 2020

Uyuni – the place

Uyuni, Bolivia

Uyuni – a fork of Spacewalk

Updated features from SUMA (downstream to upstream)

Things we have added/augmented

- Salt
- Scalability
- Usability
- React Web UI
- Python 3 and JDK11 codebase
- Coming next: Containerization

Uyuni Under the Covers

Key open source projects

- Apache, tomcat, openjdk
- Postgresql
- Salt
- Prometheus/grafana
- Devel languages: java, python, go

Uyuni: upstream project for SUSE® Manager

- Community-supported
- Monthly meeting: Uyuni Community Hours (last Friday of the month, 4pm CET)
- Runs on openSUSE Leap
- Monthly releases targeted
- Rolling-release
- Contributions welcome
- All translations enabled by default (even community ones)

Uyuni Releases

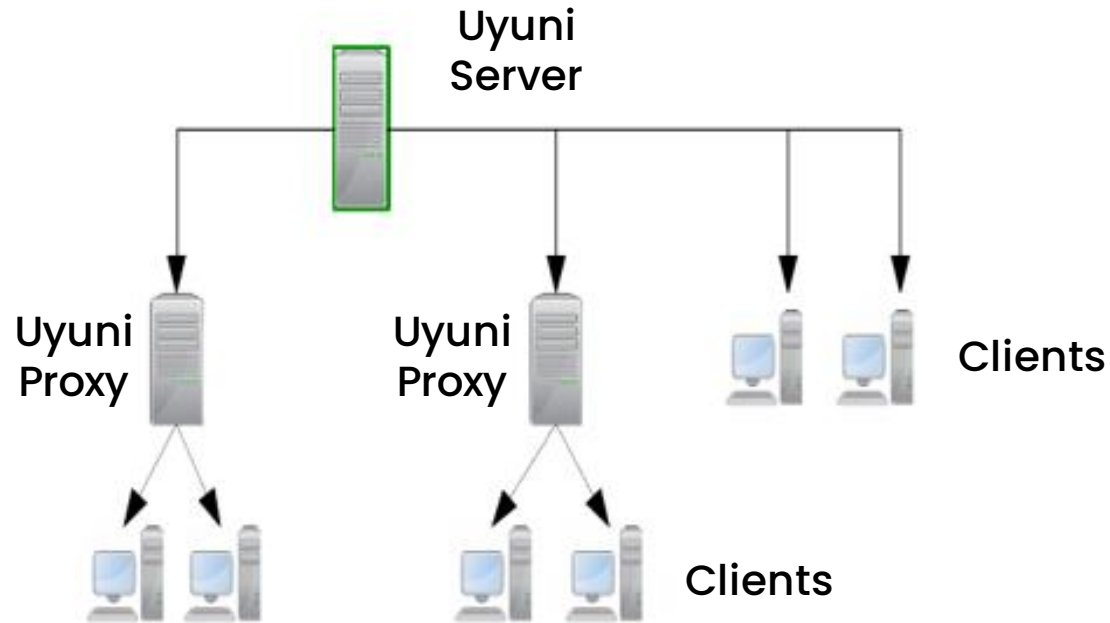

- Rolling release design
- Goal is monthly, but not guaranteed
- Current release: 2023.04 – New 2023.09 coming
- Upgrades are supported (for stable release)
- Upstream for SUSE Manager ≥ 4.0 since June 2018
- Single-container podman install – coming very soon

Bring it to containers – podman

- Single-host, single container to start
- Chose podman as container runtime environment
 - Included in our distro and direction
 - Integrated with systemd
- Uyuni tools – uyuniadm, uyunictl
 - Provision standardized storage, networking
 - Installs and sets the systemd services
 - Allows for execution inside containerized server

Uyuni Architecture

Uyuni features you can use!

- Transparent integration with Salt from salt project
- Manage on-prem, cloud, hybrid cloud or multi-cloud systems
- Content Lifecycle Management: define stages (DEV, TEST, PROD) for your software channels and apply filters to add/remove contents and create new channels
- Drift control and recurring action schedulers
- Build OS (kiwi) and container images (docker)
- Compliance: CVE audit, SCAP, subscription matching (SUSE clients)
- Monitoring (Prometheus & Grafana stack), simple deploy, included dashboards

Manage the Linux you
need

All your Linux...

- openSUSE Leap 15.X, micro
- SLES 12, 15
- SLE Micro 5.1, 5.2, 5.3, 5.4
- RHEL 7, 8, 9
 - CentOS 7
 - SUSE Liberty 7, 8, 9
- Oracle Linux 7, 8, 9
- Ubuntu 18.04, 20.04, 22.04
- Debian 10, 11, (12 coming soon)
- MicroFocus Open Enterprise Server 2018, 2023
- Amazon Linux 2
- Alma & Rocky Linux 8, 9
- Community-supported:
 - Alibaba Cloud Linux 2

Uyuni – Getting Started

- Installation guide:
 - <https://www.uyuni-project.org/uyuni-docs/en/uyuni/quickstart/quickstart-install-uyuni-server.html>
- Runs on openSUSE Leap (currently 15.4)
- Containerized version installs in 15 minutes! Guide coming soon...

A wide-angle photograph of a vast wetland landscape. In the foreground and middle ground, hundreds of flamingos are wading in shallow, reddish-brown water. They are scattered across the frame, some standing in small pools, others wading. The background features a flat, reddish-brown plain that stretches to a distant, hazy mountain range under a clear sky. The overall scene is a naturalistic depiction of a large bird colony in its habitat.

Demo/Live Look-in

The background image is a surreal landscape. It features a vast, flat, reflective surface, possibly a salt flat or a body of water, covered with numerous small, conical mounds of earth or sand. The mounds are scattered across the landscape, some in the foreground and others in the distance. The sky is a dramatic mix of orange, red, and blue, suggesting a sunset or sunrise. The overall mood is mysterious and otherworldly.
